Example:

X_1 . X_2

X_1 X_2 are independent identical.

$$f(x) = x^2\left(2x + \frac{3}{2}\right), \quad 0 < x < 1$$

Find $E(Y)$ where $Y = \underbrace{\frac{1}{X_1} + \frac{1}{X_2}}_{\text{non-linear}} + 3$.

$$E(Y) = \boxed{E\left(\frac{1}{X_1}\right)} + E\left(\frac{1}{X_2}\right) + 3$$

$$\neq \frac{1}{E(X_1)}$$

$$\boxed{E(h(x)) = \int h(x)f(x)\,dx}$$

$$E\left(\frac{1}{X}\right) = \int_0^1 \frac{1}{x} \cdot f(x)\, dx \qquad E\left(\frac{1}{X}\right) \neq \frac{1}{E(X)}$$

$$= \int_0^1 \frac{1}{x} \cdot x^2\left(2x+\frac{3}{2}\right) dx$$

$$= x^2 + \frac{3}{2}x \Big|_0^1$$

$$= \frac{5}{2}$$

$$\therefore E(Y) = \frac{5}{2} + \frac{5}{2} + 3 = 8$$
